

32' x 24' "Blue" Stage

Specifications

- Stage Width: 32' -0"
- Stage Depth: 24'-0"
- Max Trim Height: 18' -0"
- Lifting Style:
Electric Cable Winch
- Aluminum Roof
(with Rain Gutter)

The Blue Stage is a trailer stage with integral deck and roof system. Once on the job site, the stage wings fold down to create a stage deck that measures 32'-0" wide by 24'-0" deep. The roof wings then fold out and form the pitched roof (with rain gutter). The roof then raises to a height of 18'-0" above the deck along the front edge of the stage and 15'-0" above the deck at the back edge of the stage.

The overall length of the trailer with the stage is deployed is 46'-0" long, which allows the stage to be placed, nicely, across a main street.

The stage comes with two step-units (with hand rails), which can be placed most anywhere around the deck, to allow for convenient access and egress. The stage also comes with a set of scaffolding to allow the PA to be placed off the ground for better audience coverage. The roof will also accommodate two rows of light bars to be hung. (One upstage, and one downstage)
